

SCOTT FOXLEY-BERRY

Atlanta, Georgia 30317 berryscott@gmail.com • github.com/berryscott • [linkedin.com/in/scott-foxley-berry-44685694/](https://www.linkedin.com/in/scott-foxley-berry-44685694/)

PROFESSIONAL SUMMARY

Backend and Data Engineer with 8 years of experience designing and operating scalable software systems, data pipelines, and cloud-native infrastructure. Strong expertise in Go, Python, SQL, PostgreSQL, BigQuery, Kubernetes, Docker, and CI/CD automation. Experienced building production APIs, ETL workflows, event-driven systems, observability platforms, and developer tooling supporting thousands of services and billions of daily requests. Proven ability to independently own projects from requirements gathering through deployment and operational support.

TECHNICAL SKILLS

Languages: Go, Python, SQL, Bash, Rust, Scala

Backend Engineering: REST APIs, OpenAPI, JSON APIs, PostgreSQL, Distributed Systems

Data Engineering: BigQuery, Kafka, Spark, Hadoop, ETL Pipelines, Data Modeling, NLP, Machine Learning

Cloud & Infrastructure: Kubernetes, Docker, Terraform, GKE, AWS, Linux, Ansible

Observability: Prometheus, Grafana

DevOps & CI/CD: GitHub Actions, Git, Automated Testing, Release Automation

Data Platforms: Elasticsearch, MongoDB, Zookeeper

EDUCATION

Indiana University – School of Informatics, Computing, and Engineering

Master of Science in Data Science | July 2022 | GPA: 3.63

- Machine Learning and Cybersecurity Concentration
- Applied Python to machine learning, natural language processing, data mining, signal processing, and data visualization
- Research project focused on detecting crime rationalizations in online discussions using NLP and classification models

Georgia Institute of Technology – College of Engineering

Bachelor of Science in Industrial Engineering | May 2018

- Quality and Statistics Concentration
- Senior Design Project with TUG Technologies
- Winner of Overall Best Project in Georgia Tech Industrial Engineering
- Developed an optimization platform using integer programming to improve manufacturing assembly line efficiency

PROFESSIONAL EXPERIENCE

The Home Depot – Atlanta, Georgia

System Engineer II

December 2020 – Present

- Design, develop, and maintain backend services, APIs, automation platforms, and operational tooling using Go, Python, SQL, and Bash
- Build and support cloud-native applications running on Kubernetes and GKE, serving more than 4,000 internal services and over 2 billion daily requests
- Develop and maintain CI/CD pipelines using GitHub Actions, automating testing, validation, deployment, and operational workflows across Go and Python projects
- Implement observability solutions using Prometheus, Grafana, and custom telemetry tooling to improve service reliability, debugging, and performance analysis
- Lead incident response, root-cause analysis, and long-term remediation efforts for critical production issues and service disruptions
- Partner with infrastructure, security, and application teams to translate operational requirements into scalable engineering solutions and self-service tooling

Selected Projects

Watchdog Platform

- Architected and continue to develop a production Go application responsible for intelligent traffic advertisement and health validation decisions across thousands of services
- Built REST APIs returning structured JSON responses for operational integrations and automated decision-making workflows
- Developed OpenAPI specifications and automated API documentation workflows to improve usability and maintainability
- Implemented anomaly detection and rule-based health evaluation logic used to determine service readiness and traffic eligibility

- Added Prometheus metrics and monitoring capabilities to support operational visibility and performance analysis

Bifrost Bot

- Designed and maintain a Go-based Slack application hosted on GKE that automates infrastructure promotion workflows, service health reporting, documentation discovery, and customer escalation processes
- Built integrations across multiple internal systems to streamline operational support and improve developer experience

Infrastructure Validation & Automation

- Created a centralized smoke-testing platform using Go, Python, and GitHub Actions to validate infrastructure health and deployment readiness
- Automated certificate expiration detection, service validation, and documentation quality checks across large-scale environments

Customer Service Migration & Data Engineering Initiative

- Led development of an ETL and data migration platform supporting migration of customer services to a new proxy architecture
- Built Python-based data processing workflows leveraging BigQuery and machine learning techniques to identify ownership metadata and migration requirements
- Applied NLP techniques to large operational datasets to automate classification and improve migration accuracy
- Delivered data-driven recommendations and migration tooling that reduced manual effort and accelerated adoption

Featurespace — Atlanta, Georgia

Implementation Engineer

July 2019 – December 2020

- Installed, configured, and supported financial fraud detection platforms running on AWS-hosted Linux infrastructure
- Developed Python and Bash automation for deployment, configuration management, and operational support
- Worked extensively with Kafka, Elasticsearch, MongoDB, and Zookeeper to support large-scale event processing and analytics workloads
- Assisted customers with system integrations, data migrations, and production deployments

Noble Systems Corporation — Atlanta, Georgia

Implementation Engineer

May 2018 – July 2019

- Installed, configured, and supported enterprise software platforms across Linux and Windows environments
- Developed Python and Bash automation scripts for deployment and operational workflows
- Managed PostgreSQL databases, including configuration management, operational reporting, and customer data administration
- Delivered technical training and implementation support for customer deployments

ACTIVITIES & VOLUNTEERING

Activities: Competitive Swimmer, Billiards Team Captain, Former Swim Team Head Coach, Former Swimming Referee, Math Tutor

Volunteer Work: Trees Atlanta volunteer, Special Olympics fundraiser and donor, participant in local charity athletic events
